

=====
Installation instructions for CMacTeX 2004/11/29
=====

Please check `_first_` the same file name in the LaTeX sources directory
and `_read_` the given instructions.

CMacTeX is a web2c engine.

Features: many are provided by web2c, specially the "-mltex" option.
=====

Distribution to install: unix/linux for MacOS X or higher
===== otherwise FrenchPourMac.

Status
=====

CMacTeX is known to run correctly with FrenchPro.

General instructions
=====

Read Bernard's documentation "ALIRE.pdf" (or README_x.pdf in each
directory). And just follow the instructions.

Notice that to create a MlTeX format you can create an AppleScript such
as the following and run it:

```
tell application "tex"
    activate
    exec "initex -mltex frlatex.fr"
end tell
```

(the format file will probably be created in the System folder where AppleScript
is staying)
